The National Multiple Sclerosis Society

Multiple sclerosis, an unpredictable, often disabling disease of the central nervous system, interrupts the flow of information within the brain, and between the brain and body. Most people are diagnosed between the ages of 20 and 50. Approximately 2.3 million people have MS worldwide. Most people are diagnosed between the ages of 20 and 50.

Your contribution to the National MS Society funds research for a cure of MS. The Society supports more MS research and serves more people with MS than any national voluntary MS organization in the world. The Society also offers programs and services that promote and support knowledge, health and independence. Our mission is to mobilize people and resources to drive research for a cure and to address the challenges of everyone affected by MS.
